**SE 4367 (Software Testing)**
Homework #7, Cause-Effect Graph

Given the cause-effect graph below:

a) Generate the Boolean expression for this CEG, excluding the one-and-only-one operation (the "O").

b) Generate the decision table for the CEG. You do not have to address the AND/OR heuristics to avoid combinatorial explosion.

Grading Rubric

a)   Boolean expression, 35 points

       Each Boolean variable and operator correct is worth 5 points

b)   Decision table, 65 points

       Each vector Vi correct is worth 10 points

       Getting the one-and-only-one operation correct is worth 5 points
